2116-35 Block Downconverter, 3.4 - 4.2 GHz

The 2116-35 Downconverter converts 3.4 - 4.2 GHz to 0.95 - 1.75 GHz with low phase noise and flat frequency response. Frequency translation is via a 5.15 GHz local oscillator. Front panel LEDs provide indication of DC Power, External 10 MHz, and PLL Alarm. The gain is +55 dB. Connectors are Type N female for the RF and BNC female for the L-Band and external reference input and reference output. A three-way switch controls which 10 MHz reference is being used. In the INT position, the internal reference is used, in the EXT position, the external reference is used, and in the AUTO position, the internal reference is used unless a $3 \text{ dBm} \pm 3 \text{ dB}$, 10 MHz reference signal is connected to the external reference input. The 2116 is powered by a $100-240\pm10\%$ AC power supply, and mounted in a 1 3/4" X 19" X 14" rack mount chassis.
