## 1582-225L2 Dual 1:1 Switch, DC-2.5 GHz, 2PDT, M\&C Monitor and Channel Select

The 1582-225L2 Dual 1:1 Switch provides two 2PDT switch pairs ( SWITCH 1 and SWITCH 2). Each switch independently provides Auto, Manual or Remote (M\&C) latched relay switching between PRIMARY and BACK-UP, DC - 2.5 GHz RF signals. The M\&C provides monitoring of all parameters, Switch and History Reset, and Channel Selection (when in Auto mode only). Alarm conditions on PRIMARY and BACK-UP are either a contact closure to ground or an open (selectable by a rear panel DIP switch). Auto has three modes:

Auto - PRIMARY PRIME : The PRIMARY preferred mode - switches from PRIMARY to BACK-UP only if PRIMARY alarms and BACK-UP is good. The unit switches back to PRIMARY when PRIMARY is no longer in alarm or both PRIMARY and BACK-UP in alarm.

Auto - LATBACK-UP; Latch to BACK-UP mode - switches from PRIMARY to BACK-UP if PRIMARY alarms and BACK-UP is good and stays in BACK-UP regardless of PRIMARY or BACK-UP alarm conditions until reset to PRIMARY by the front panel Switch Reset switch or M\&C command.

Auto - MIN SW; Minimum Auto switching mode - switching occurs if the active channel (set by the front panel Manual Select switch or M\&C command) alarms and the other channel is clear. It switches back if this channel then alarms and the other is clear.

When power is lost, the current latched state remains selected. Front panel LEDs indicate PRIMARY and BACK-UP alarms, Remote or Manual mode, and redundant power supplies on. Rear panel DIP switches set alarm polarity (NO or NC for alarm), M\&C interface, and Auto modes (PRIMARY PRIME, LATBACK-UP, or MIN SW). The front panel switch selects the signal path in the Manual mode or selects AUTO switching. The RS232 or RS422/485 M\&C (Ethernet optional) monitors switch positions, LED and alarm status, and selects the RF switch position (when in Auto mode only). A contact closure to ground indicates an internal fault condition or loss of power. Connectors are BNC for RF signals and DB9 for M\&C and alarm input and output contact closures. It is powered by separately fused, 100-240 $\pm 10 \%$ VAC redundant power supplies.

1582-225L2 FRONT AND REAR PANEL (OPTIONAL ETHERNET SHOWN)

## 1582-225L2 Technical Specifications

## RF Switch Characteristics (Each Switch)

Impedance / Connectors $75 \Omega$ /BNC
Return Loss $\quad 12 \mathrm{~dB}$ min, $\geq 14 \mathrm{~dB}$ typ; DC to 1.5 GHz
10 dB min, $\geq 12 \mathrm{~dB}$ typ; 1.5 to 2.5 GHz
Frequency Response
Isolation
Insertion Loss
Switch time $\leq \pm 0.5 \mathrm{~dB}, 40 \mathrm{MHz} \mathrm{BW} ; \leq \pm 1 \mathrm{~dB}, 1 \mathrm{GHz}$ BW
55 dB min, $\geq 60 \mathrm{~dB}$ typ; DC to 1.5 GHz
45 dB min, $\geq 50 \mathrm{~dB}$ typ; 1.5 to 2.5 GHz
1.5 dB max,$\leq 1.0 \mathrm{~dB}$ typ; DC to 1.5 GHz
2.5 dB max, $\leq 2.0 \mathrm{~dB}$ typ; 1.5 to 2.5 GHz

DC Switching
Type, Configuration Latching Relay, 2PDT, no termination
Alarm and Control, M\&C
Alarm output signal Form C relay: 30VDC, 0.5A max
M \& C Interface/baud rate RS232C or RS422/485, selectable/9600 (Ethernet Optional) Controls, Indicators

Auto/Man
Sw Reset, History Reset
Front Panel switch
Pwr; Rem, Man, Alarm Green, Yellow, Red, Red LED-Form C contact closure, M\&C
Connectors, Other
RF Connectors $75 \Omega$ BNC (female)
Ext. Alarms In, M\&C Con. DB9 (female)
Size 1 RU, 19 inch standard chassis 1.75 " high $X 12.0^{\prime \prime}$ deep
Power Redundant 100-240 $\pm 10 \%$ VAC, $47-63 \mathrm{~Hz}$, 20 Watts maximum power supplies
${ }^{*} 10^{\circ} \mathrm{C}$ to $40^{\circ} \mathrm{C}$; Specifications subject to change without notice

1582-225L2 BLOCK DIAGRAM

| Available Options |
| :--- |
| Remote M\&C Interfaces |
| W8 - Ethernet |
| W18 - Ethernet SNMP w/MIB |
| W28 - Ethernet TCP/IP Direct Access |
| W31-0 to +50 degrees C operation |
| Connectors/Impedance |
| D $-50 \Omega$ BNC |
| SS $-50 \Omega$ SMA |
